

THE **akeron** SECURISCAN Scan-a-note

The Akeron AK. 60 desktop, or wall mounted, ultraviolet scanner unit for detecting the authenticity of banknotes, in particular, and also credit cards and documents possessing security characters hidden in their 'artwork'.

The special material and characteristics of genuine UK banknotes do not glow when subjected to the UV test but forged notes will glow.

Certain substances invisible in the 'artwork' of credit cards and certain documents, glow quite brilliantly when placed under an ultraviolet blacklight blue fluorescent tube, thus indicating their authenticity.
